

LOCATION  
SUGGESTION FOR AN  
ICE-CREAM PARLOUR  
IN BROOKLYN, NEW  
YORK

# NEWYORK CITY

- New York City is not only the most populous city of the United States of America but it also the most densely populated city in the country.
- It had an estimated population of 8.4 million in 2018 over an area of 784 square kilometres.
- The city is located at the southern tip of the state of New York.
- The city is often referred to as the cultural, financial, and media capital of the world, and commands a very high impact upon commerce, entertainment, research, technology, education, politics, tourism, art, fashion, and sports.
- New York is situated on one of the world's largest natural harbours.

## 5 BOROUGHES IN NEW YORK

# BROOKLYN BOROUGH

- Brooklyn (Kings County) is situated on the western tip of Long Island.
- It is new York's most populous borough.
- Brooklyn is known for its cultural, social, and ethnic diversity, an independent art scene, distinct neighbourhoods, and a distinctive architectural heritage.
- Downtown Brooklyn is the largest central core neighbourhood in the outer boroughs.
- The borough has a long beachfront shoreline including Coney Island.

# BROOKLYN ICE-CREAMS

- A small ice-cream parlour was opened in 2012 by a local resident Mr. Ridley Johnson in the Bay Ridge area of Brooklyn.
- Bay Ridge is a residential neighbourhood in the southwest corner of the New York City borough of Brooklyn.
- Being nearer to the coast, the area received high number of footfalls during the day which further increased during the night.
- Key attractors were the fruit flavoured ice creams which were loved by kids, adults and older people.
- Soon the business flourished and Mr. Johnson moved to a bigger parlour in the town centre in 2015 and named it 'Brooklyn Ice-Creams'.
- Since then the business has increased and daily footfall is 500 which includes not only people from the neighbourhood but lovers of the ice-cream from other parts of Brooklyn and Manhattan.

# THE BUSINESS PROBLEM

- Mr. Ridley Johnson the owner of Brooklyn Ice-Creams wants the help of data in finding the next best locality for his shop.
- The research problem can be stated as “To suggest an appropriate location for an extension branch of Brooklyn Ice-Creams in in Brooklyn area down south.
- Following are the 6 areas of interest:
  - i. Sea Gate
  - ii. Coney Island
  - iii. Brighton Beach
  - iv. Manhattan Beach
  - v. Sheepshed Bay
  - vi. Gerritsen
- Following two factors shall be considered while selecting a neighbourhood:
  - Neighbourhood should be similar to the Bay Ridge area as people with similar lining and neighbourhood locations shall increase the chance of success
  - The neighbourhood should not have ice-creame as among the most common venues.

# TARGET AUDIENCE AND STAKEHOLDERS

- Mr. Ridley Johnson – Owner of Brooklyn Ice Creams
- Mr. Natham – Property Dealer

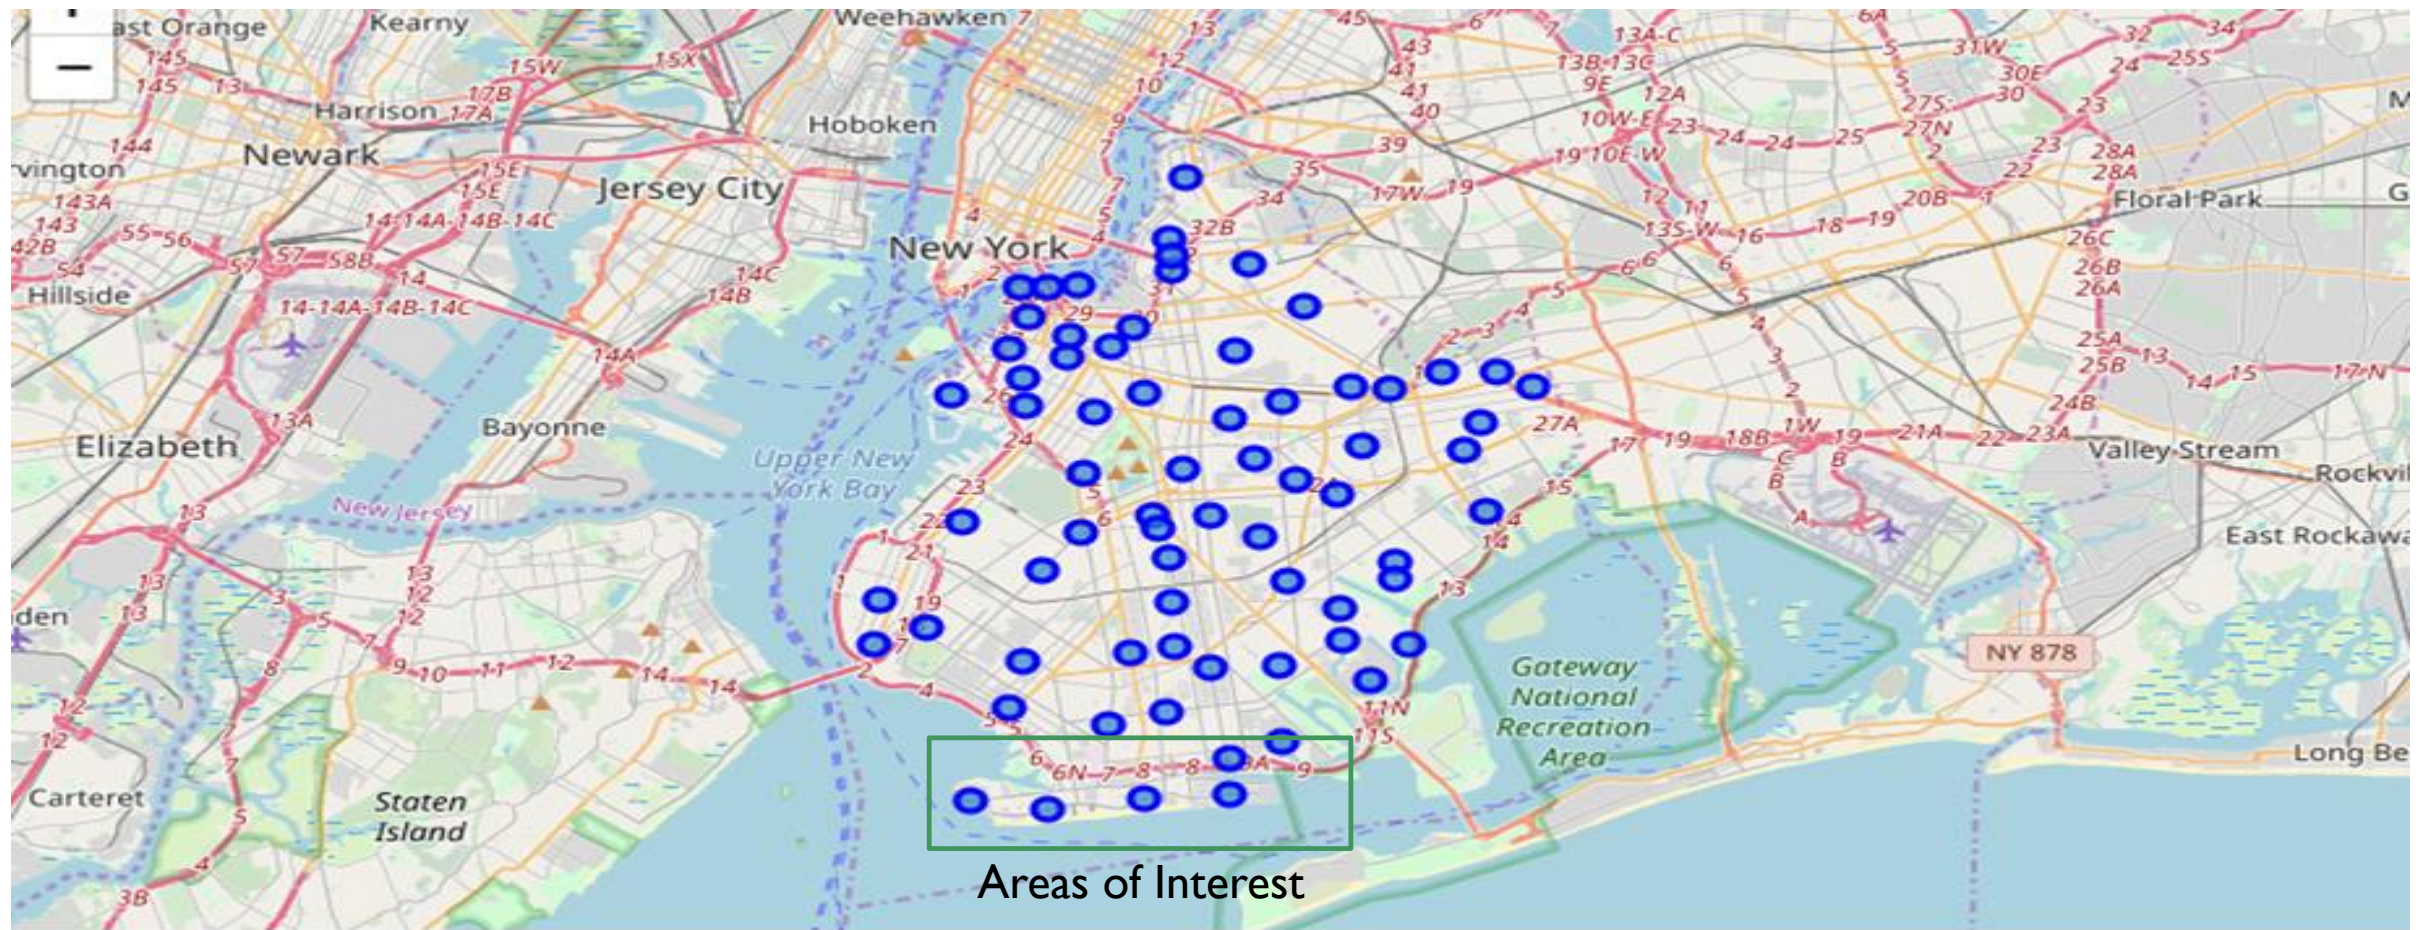

# DATA SOURCE

- Twofold data is basically required for the project.
  - Brooklyn, New York neighbourhood data.
  - Nearby places data of each Brooklyn neighbourhood.
- A Jason file named '*newyork\_data.json*' was available to the author at the web address :-  
[https://cocl.us/new\\_york\\_dataset](https://cocl.us/new_york_dataset).
- The dataset included some 306 neighbourhood of the 5 boroughs of New York City including those in the Brooklyn borough.
- Further data revealed that information about 70 neighbourhood in Brooklyn area was available in the dataset.

# BROOKLYN NEIGHBOURHOODS

# Venues Found in Each Neighbourhood

# BAY RIDGE AREA TOP VENUES (BY FREQUENCY)

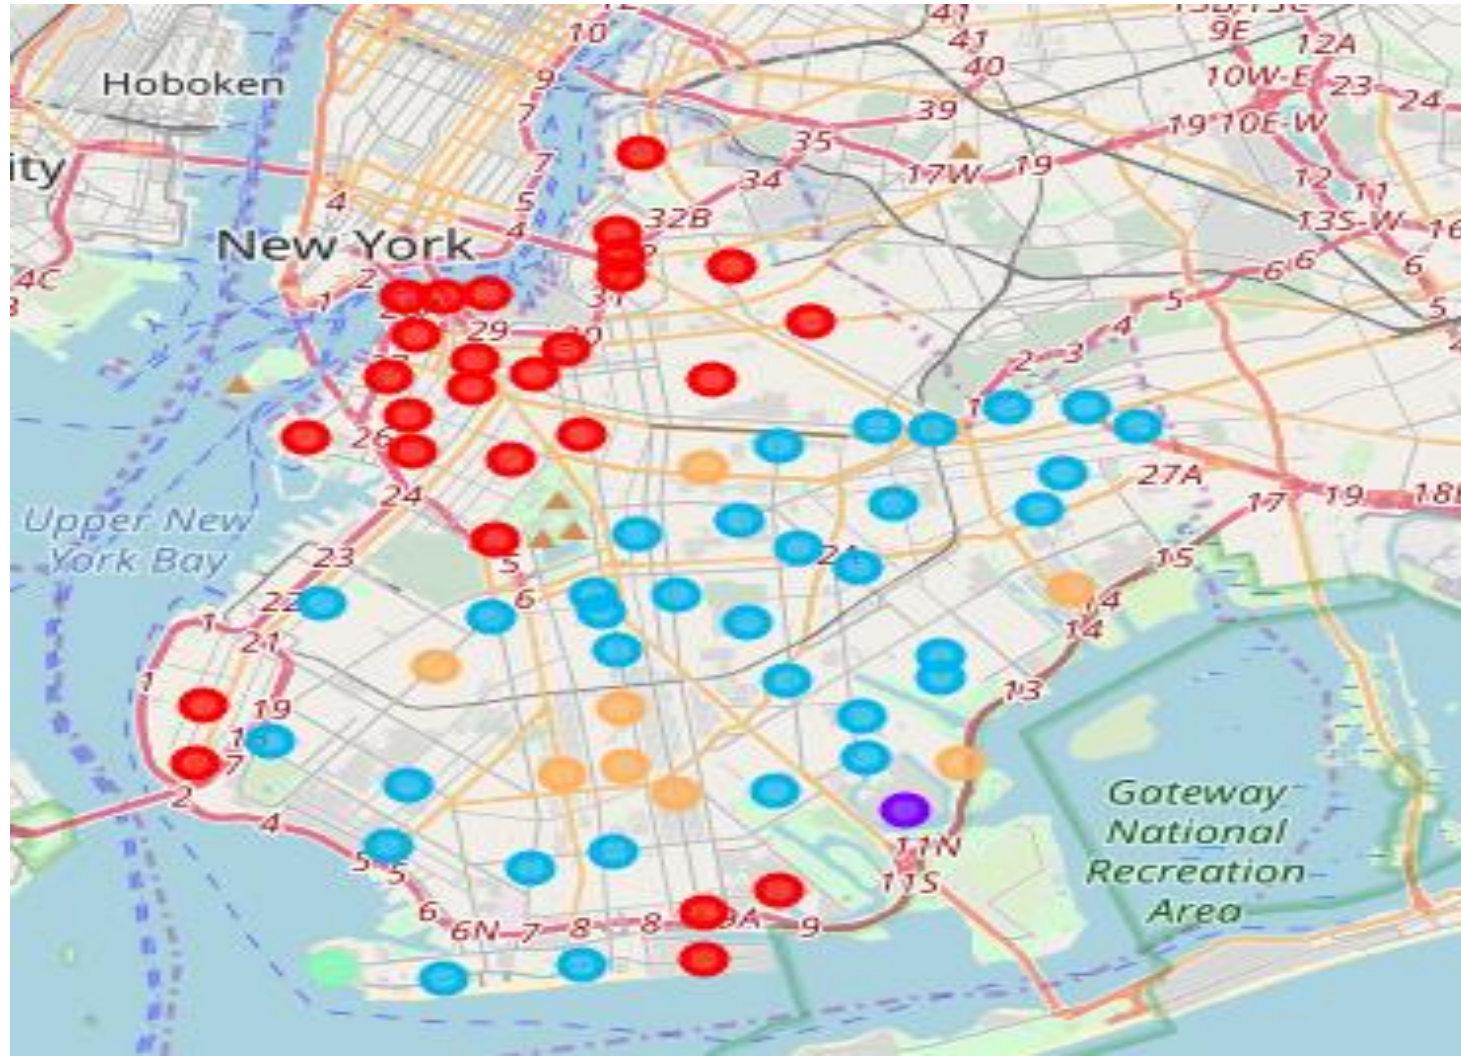

# METHODOLOGY

- Data from New York json file was converted into a Brooklyn neighbourhood data frame which also contained geographical coordinates of each neighbourhood.
- Thereafter, using Four Square nearby API, 50 venues within 500 m radius of neighbourhood were fetched and further used to derive clustering model.
- As there was a requirement of clustering the neighbourhoods, it was considered appropriate to deploy K-Means Clustering.
- K-Means clustering is one of the simplest and popular unsupervised machine learning algorithms. A cluster usually refers to a collection of data points aggregated together because of certain similarities and in this case, we were looking for similar neighbourhoods.

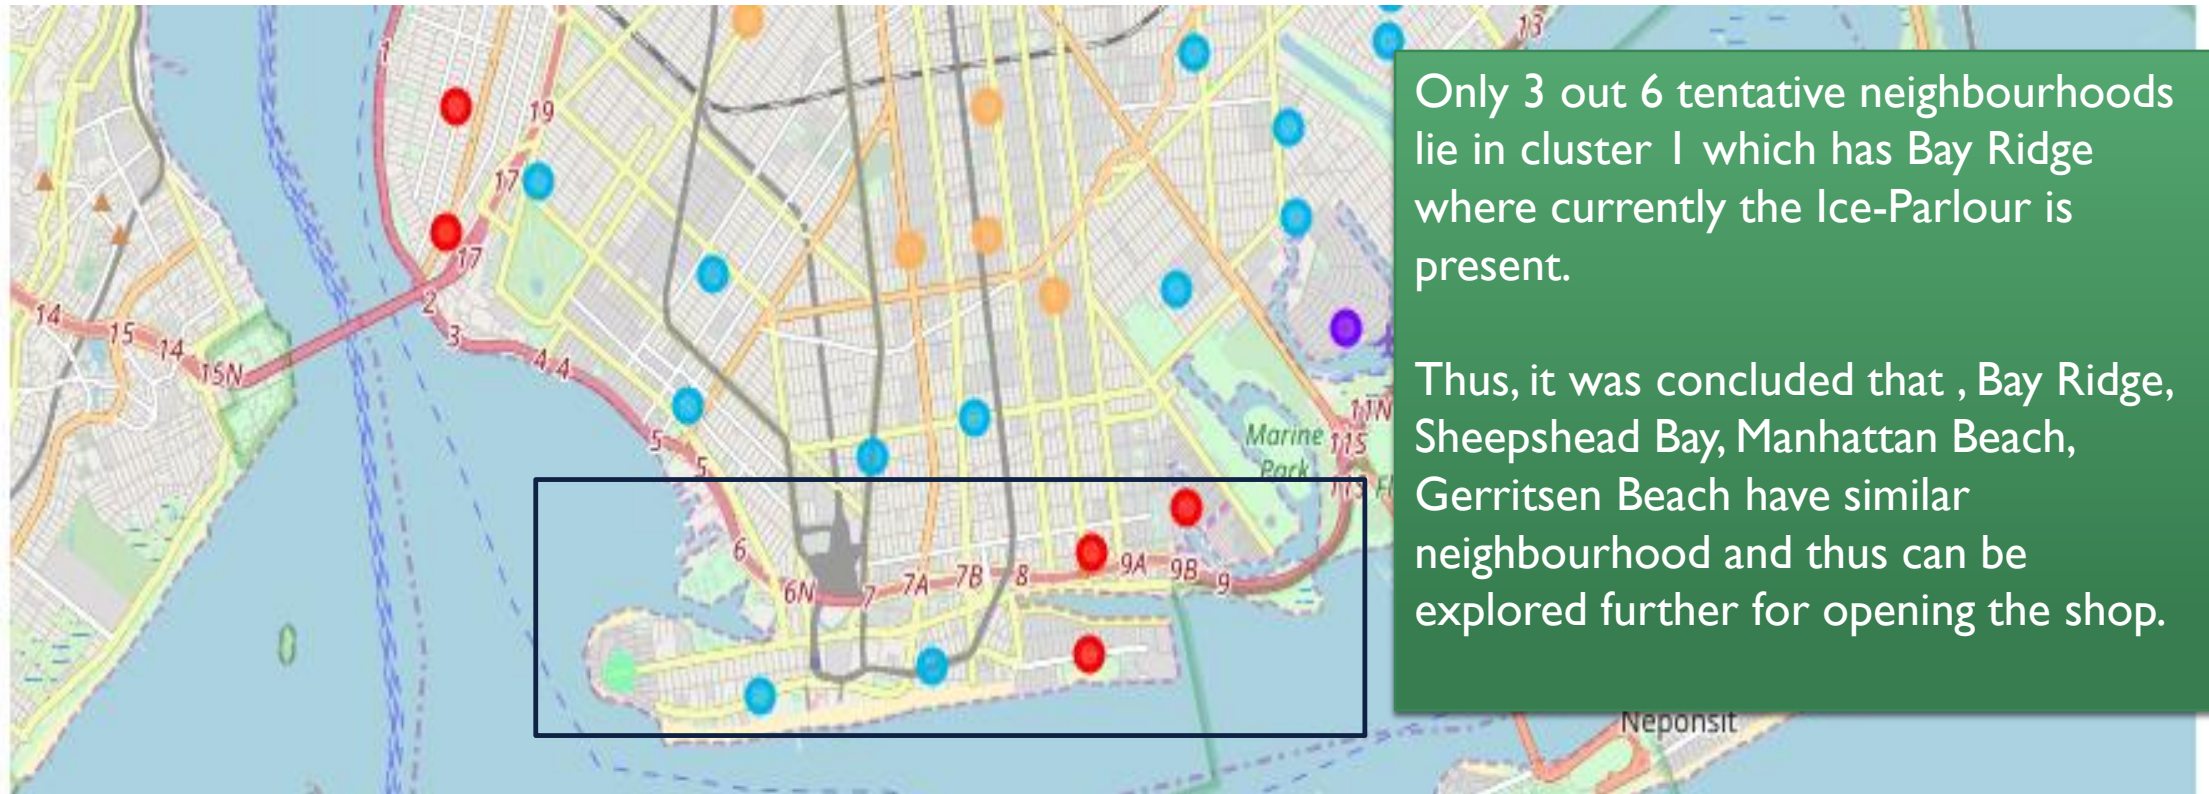

# RESULTS AFTER K-MEANS CLUSTERING

# CLUSTER DETAILS

Cluster	Colour Depiction	Number of Neighbourhoods
Cluster-1	Red	27
Cluster-2	Purple	1
Cluster-3	Blue	33
Cluster-4	Green	1
Cluster-5	Orange	8

## DISCUSSIONS – CLUSTERS OF AREAS OF INTEREST

# SUMMARY OF CLUSTER ANALYSIS

Cluster	Neighbourhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue
1	Bay Ridge	Spa	Italian Restaurant	Greek Restaurant	Ice Cream Shop	Pizza Place
1	Sheepshead Bay	Dessert Shop	Turkish Restaurant	Sandwich Place	Yoga Studio	Grocery Store
1	Manhattan Beach	Bus Stop	Café	Ice Cream Shop	Beach	Sandwich Place
1	Gerritsen Beach	Ice Cream Shop	Bar	Pizza Place	American Restaurant	Convenience Store
3	Brighton Beach	Russian Restaurant	Restaurant	Beach	Eastern European Restaurant	Bank
3	Coney Island	Caribbean Restaurant	Baseball Stadium	Monument / Landmark	Fried Chicken Joint	Food Stand
4	Sea Gate	Bus Station	Spa	Home Service	Beach	Women's Store

# DISCUSSIONS

- Manhattan Beach has ice cream as the third most common venue
- Gerritsen Beach had Ice-Cream venues as the most common.
- Thus, only Sheepshead Bay was found to be appropriate for opening of new outlet of Brooklyn Ice-Creams.

## CONCLUSION

Mr. Johnson and Mr. Wright should explore appropriate location Sheephead Bay area as it met their requirements of similar neighbourhood and lesser number of existing ice-cream shops
